

Request for Proposal: ASSET AND LIABILITY MANAGEMENT SYSTEM

~ One Bank. One Africa ~

All rights reserved. These materials are confidential and proprietary to Ecobank Group, and no part of these materials should be reproduced, published in any form or by any means, electronic or mechanical including photocopy, recording or otherwise or stored in any information storage or retrieval system of any nature nor should the materials be disclosed to third parties without the prior express written authorization of Ecobank.

Executive Summary

The proposed Asset and Liability Management (ALM) System is intended to provide a centralized, enterprise-wide platform for the effective management of Liquidity Risk and Interest Rate Risk in the Banking Book (IRRBB). The solution will enable the Bank to standardize and automate the identification, measurement, monitoring, and reporting of ALM related risks across all entities, thereby strengthening risk governance and supporting informed strategic decision making.

The system will consolidate data, methodologies and assumptions into a single, consistent framework, ensuring the use of accurate, industry aligned models for the calculation of key ALM, liquidity, and IRRBB metrics. By eliminating fragmented processes and fragmented tools, the platform will enhance efficiency, reduce operational risk, and improve the timeliness and reliability of reporting.

A key capability of the solution will be its ability to provide robust monitoring and control mechanisms, including the tracking of liquidity and IRRBB limits, with built-in early warning indicators to proactively identify emerging risks. In addition, the system will deliver comprehensive reporting and analytical tools to support trend analysis, scenario evaluation, and executive level insights into the Bank's risk profile.

The ALM System will also incorporate advanced stress testing functionalities, enabling the simulation of various market and liquidity scenarios across both affiliate and Group balance sheets. This will ensure a holistic view of risk exposure under normal and stressed conditions, supporting regulatory compliance and strengthening the Bank's resilience.

Overall, the implementation of this system will significantly enhance the Bank's ALM capabilities by improving risk visibility, standardizing processes, enabling proactive risk management, and ensuring alignment with regulatory expectations and best practices.

1.0 Transformation Principles

All proposals must align with the following:

1.1 Architectural Principles

- MACH-aligned (Modular, API-first, Cloud-native, Headless-ready)
- Independent deployability of modules
- Stateless service scalability
- No hidden coupling between modules
- Configurable product engine (not code-dependent)
- Infrastructure-as-code deployment
- Observability and telemetry built-in

1.2 Delivery Principles

- Parallelizable workstreams
- MVP-first deployment
- Vertical slice release capability
- Automated testing & CI/CD
- Explicit dependency mapping

1.3 Commercial Principles

- Transparent cost model
- Milestone-based payments
- Performance accountability
- Scalability without punitive license expansion

2.0 Functional Modules Specification

The Asset and Liability Management (ALM) System will provide a comprehensive, integrated platform that forms the foundation for managing liquidity risk, IRRBB, and balance sheet exposures across the Group.

It will deliver standardized capabilities for risk identification, measurement, monitoring, reporting, and stress testing using centralized data and industry-aligned models.

The system will also enable robust analytics, limit monitoring, and regulatory reporting to support proactive risk management and informed decision-making.

2.1 Risk Metrics

The system should be able to calculate on a periodic basis (most likely) risk metrics that are relevant for the proper risk management of the group. These risk metrics at the very least should include:

Key Capabilities:

- **Liquidity Risk Metrics**
- Interest Rate Gap Analysis
 - Behavioral Gap Analysis

➤ Contractual Gap Analysis

- liquidity Coverage Ratio
- Net Stable Funding Ratio
- Liquidity Ratio
- Loan to Deposit Ratio
- Deposit Limits
- Depositor Concentrations
- Cross Currency Funding

- **Interest Rate Risk in the Banking Book (IRRBB) Metrics**

- Net Interest Rate (NII) Sensitivity
- Economic Value of Equity
- The six prescribed interest rate shock scenarios as outlined in the Bases guidelines on IRRBB.
- Custom scenarios tailored to the bank's specific risk profile.

- **Profitability Ratio**

- Non-Performing Loans
- Non-Earning Asset Ratios
- Net Interest Margin
- Interest Income / Total Income
- Interest expense/Total Income
- Interest Bearing Assets / Interest Bearing Liabilities

- **FTP – Fund Transfer Pricing**

- FTP Module to apply funding costs across different business segments and product types
- Determine cost of pooled funds
- Ability to implement Base FTP and Liquidity Premium
- Net Revenue Funding
- **Models**
- Modules in the system must be transparent and confirm Basle III standards
- Module documentation should be provided and accessible

- **Stress Testing and Scenario Analysis**

The system should have the ability to stress test and perform scenario analysis across each affiliate individually as well as aggregated at group level. This stress testing at the very least should include:

- Liquidity stress test that stresses the liquidity of the affiliate based on
 - Assumed deposit run-off profile
 - Liquid asset assumptions
 - Shocks to available emergency or interbank funding
 - Under a determined survival horizon

- **Limit Monitoring and Breach Resolution**

The system must be able to monitor defined metrics against input limits and have a series of escalation points as the metric utilization approaches and breaches a limit.

It must also have the ability to track limit resolution both by the Treasury and Market Risk teams including the allowance of temporary limits and timelines of expiry. It should include the ability for notes on causes of the breach and the

resolution actions and timelines.

- **Behavior Analysis**

The application must be able to perform regression analysis on different asset and liability types and provide insights and metrics on customer behavior in terms of.

- Run off profile of customer deposits based on type (Core/Non-Core)
- Pay-off of assets by clients

2.2 Liquidity Risk Map

The system should allow generation of a liquidity Risk Map deriving from the liquidity Assessment process. The liquidity risk map should allow a visual representation that provides a comprehensive overview of the key liquidity risks faced by an organization. The map should assist in prioritizing risks, guiding risk management efforts, and facilitating informed decision-making at the organizational level.

2.3 Key Risk Indicators (KRIs)

The KRI for an asset and liability management (ALM) system should help monitor and manage risks related to liquidity, interest rates, market fluctuations and operational challenges.

2.4 Control Issue Remediation

The application should have control issue remediation which will focus on addressing deficiencies in system's processes, operations or compliance measures. This will ensure the system functions optimally that will align with regulatory standards and effectively mitigate risk associated with managing assets and liabilities. The key focus areas for control remediation should be as follows.

- Regulatory Compliance
- The platform should ensure adherence to standards such as Base III, liquidity ratios and stress-testing requirements.
- Operational Efficiency
- The platform should address inefficiencies in data processing, reporting and risk assessment workflows.
- Risk Mitigation
- The platform should be able to strengthen processes to manage interest rate risks, liquidity risks and counterparty exposures

2.5 User Roles and Permissions

The software should allow privileged users to set user roles with specific access rights to ensure data security and confidentiality.

- Administrators: Responsible for system configuration, user management, and overall platform administration.
- Control Testers: Responsible for planning, executing, and documenting control testing activities.
- Reporting Users: Responsible for generating and accessing various reports and dashboards.
- Role-based access control to ensure data security and confidentiality.
- User authentication and authorization mechanisms.

2.6 Reporting and Analytics

The software will provide comprehensive reporting and analytics capabilities to facilitate informed decision-making. It should include:

- Standardized reports for risk assessments, control testing, operational risk events, key risk indicators, and control log issues.
- Customizable reports and dashboards for different user levels.
- Interactive dashboards with real-time data visualizations and drill-down options.
- Ad-hoc reporting functionality to enable users to create custom reports as needed.
- Visual representation of risk metrics and trends.

2.7 Data Management

- Standardized reports for risk assessments, control testing, operational risk events, key risk indicators, and control log issues.
- Customizable reports and dashboards for different user levels.
- Interactive dashboards with real-time data visualizations and drill-down options.
- Ad-hoc reporting functionality to enable users to create custom reports as needed.
- Visual representation of risk metrics and trends.

2.8 Integration

- Support for data import/export in various formats
- Ability to integrate with existing risk management tools or data sources.

2.9 Performance

- Optimize loading times for reports and dashboards.
- Ensure the software's responsiveness and scalability to handle increasing data volumes.

2.10 System Architecture and Deployment

- Deployment: The solution should adopt an agnostic approach, supporting both cloud based and on-premises deployments.
- High Availability (HA) & Disaster Recovery (DR): The solution should ensure high availability, incorporating automated failover and backup recovery capabilities.
- Performance Optimization: The solution should be capable of efficiently handling large datasets using multi-threading.

2.11 Data Management and Integration

- Multi-Source Data Integration: Ability to pull data from core banking system (Flexcube), treasury platform (Calypso) and market data providers (e.g. Bloomberg, Reuters).
- Data ingestion from various file formats (CSV, XML, JSON, Excel, etc).
- API-based integration for real-time data synchronization.

2.12 Data Validation and Cleansing

- Automated error handling and data integrity checks to ensure accurate ALM reporting.

2.13 Multi-Platform Compatibility (OS)

- The solution should follow an agnostic approach, enabling deployment of either Windows or Linux operating systems for on-premises implementation.

2.14 Security and Compliance

- Role based access control and multi-factor authentication (MFA).
- Full transaction history and user activity audit logs for compliance.

2.15 Support and Maintenance

- 24/7 Technical support: SLA based round the clock support with a dedicated account manager
- Regular updates and Patch Management: Software updates for enhancements and security patches

2.16 Expected Benefits in Asset and Liability Management System

The expected benefits of the ALM system should provide Ecobank with a comprehensive framework for managing risks, optimizing resources and ensuring compliance with regulatory standards. The key benefits to be delivered from implementing ALM systems are

- **Enhanced Risk Management**
 - Liquidity Risk Management
 - Interest Rate Risk Management
 - Market Risk Management
 - Credit Risk Oversight
- **Improved Decision-Making**
 - Real-Time Analytics
 - Scenario Modeling
 - Strategic Planning
- **Operational Efficiency**
 - Automation of Processes
 - Streamlined Reporting
 - Integration Capabilities
- **Regulatory Compliance**
 - Alignment with Standards

- Audit Trail
- Stress Testing and Reporting
- **Financial Performance Optimization**
 - Improved Profitability
 - Cost Management
 - Yield Maximization
- **Enhanced Data Management**
 - Data Accuracy and Consistency
 - Comprehensive Insights
 - Predictive Analytics
- **Scalability and Flexibility**
 - Scalable Solutions
 - Multi-Currency and Multi-Entry Support
 - Capability data sheets
 - Reference sites
 - Technical comparison between bidders and other competitors
- **Logistic Requirements**
 - To be discussed (TBD) at the later stage of the project implementation.

2.17 Testing

Successful Bidder shall conduct acceptance tests to ascertain the quality and completeness of the installation. (Acceptance test details to be finalized at the time of signing the contract).

2.18 Documentation and Reports

- Standardized reports for risk assessments, control testing, operational risk events, key risk indicators, control log issues
- Customizable reports and dashboards for different user levels.
- Interactive dashboards with real-time data visualizations and drill-down options.
- Ad-hoc reporting functionality to enable users to create custom reports as needed.
- Visual representation of risk metrics and trends.
- High level design documentation
- Low level design documentation

3.0 Required Platform Architecture & Design Principles

3.1 Architectural Framework

The proposed solution must align with the Bank's target architecture for a **modern, composable, insight-driven enterprise platform**, based on MACH principles:

- Microservices
- API-first
- Cloud-native
- Headless

Required Logical Architecture Layers

Vendors must demonstrate how their platform implements the following:

3.1.1 Headless Services Layer

- API / GraphQL exposure
- Channel-agnostic delivery
- Event-driven capabilities

3.1.2 Workflow & Orchestration Layer

- BPMN-compliant engine
- SLA timers, escalations
- Human-in-the-loop controls
- RPA / automation hooks

3.1.3 Core Processing / Product Engine Layer

- Instrument & Product Modeling Engine
- Behavioral & Assumption Modeling
- Interest Rate Risk (IRRBB) Engine
- Liquidity Risk Engine
- Scenario & Stress Testing Framework
- Funds Transfer Pricing (FTP) Engine
- Multi-Currency & Multi-Entity Processing
- Data Processing & Aggregation Layer

3.1.4 Repository / Data Services Layer

- Transactional + analytical separation
- Retention, auditability, compliance controls

3.1.5 Integration Fabric

- API gateway compatibility (e.g. Apigee)
- Event streaming support
- Webhooks and async patterns

3.1.6 Intelligence & Analytics Layer

- Metadata extraction
- Process intelligence
- AI/ML augmentation capabilities

3.1.7 Observability & Administration Layer

- Logs, metrics, traces
- Performance monitoring
- Operational tooling

3.2 Core Design Principles (Non-Negotiable)

All principles below must be **explicitly addressed and evidenced**:

- API-first (all capabilities exposed via versioned APIs)
- Modular microservices (clear bounded contexts)
- Cloud-native / hybrid-ready
- Headless UX enablement
- Zero-trust security model
- High availability ($\geq 99.99\%$)
- Composable interoperability
- Insight-driven telemetry design

3.3 Integration & Interoperability Expectations

The platform must operate as part of a broader ecosystem:

- Core banking systems
- ERP / Finance systems
- CRM / Customer platforms
- External partners (bureaus, payments, identity)

Vendors must describe:

- Integration patterns supported
- Pre-built connectors vs custom integrations
- API governance compatibility
- Event-driven orchestration capabilities

4. Mandatory Architecture Disclosure & Technical Accountability

This section is where we **separate serious vendors from slideware**.

4.1 Architecture Disclosure (Mandatory)

Vendor must provide:

- End-to-end architecture diagram
- Deployment topology

- Service decomposition

Must explicitly identify:

- Independent services
- Shared services
- Stateful components
- External dependencies

4.2 Modularity & Dependency Declaration

Vendor must disclose:

Component	Independent?	Requires Other Modules?	License Dependency?
-----------	--------------	-------------------------	---------------------

Explicitly confirm:

- No hidden mandatory bundling
- No forced suite dependency
- No licensing lock-in via architecture

4.3 API & Integration Disclosure

Vendor must provide:

- API catalog (sample or full)
- Authentication standards supported
- Rate limits and performance benchmarks
- Event-driven capabilities

Confirm:

- ☐ All core functions are API-exposed
- ☐ No UI-dependent logic exists
- ☐ APIs support external orchestration

4.4 Performance & Scalability Commitments

Vendor must provide measurable benchmarks:

Metric Value Tested Scenario

Including:

- Throughput
- Latency
- Concurrent users
- Peak load behavior

4.5 Non-Functional Commitment (Contractual)

Vendor must confirm ability to contractually commit to:

- Availability $\geq 99.99\%$
- RPO ≤ 15 minutes
- RTO ≤ 30 minutes
- Security compliance standards
- Observability and monitoring

4.6 Sandbox & Environment Parity

Vendor must provide:

- Full sandbox environment
- API simulation capability
- Production parity assurance

Confirm:

- Sandbox matches production behavior
- Enables full workflow testing

4.7 Data & Intelligence Framework Disclosure

Vendor must describe:

- Data architecture
- Event capture model
- Analytics capabilities
- Process intelligence support

Must confirm:

- All workflow events are traceable
- Data is externally accessible via APIs
- Supports enterprise data lake integration

5.0 Vendor Submission Guidelines and Evaluation Criteria

This section defines how vendors must respond.

Responses must be:

- Structured
- Evidence-based
- Internally validated
- Suitable for contractual reference

Narrative responses without supporting detail may be disregarded.

5.1 Mandatory Response Structure

Vendors must respond in the following format:

5.1.1 Executive Summary (Max 2 pages)

- Solution overview
- Key differentiators
- Alignment to:
 - Modular architecture
 - API-first design
 - Multi-entity scalability
- Why statement of why your platform is suitable for this transformation

5.1.2. Company & Delivery Footprint

Provide:

- Years of operation
- Ownership structure
- Regional presence
- Experience in multi-country or multi-entity environments
- Relevant financial services clients (last 5 years)

Must include:

- At least 2 comparable implementations
- Deployment scale (users, countries, volumes)

5.1.3. Functional & Capability Response

For each requirement (Section 4):

Indicate:

-  Fully supported (native)
-  Partially supported (configuration required)
-  Requires integration
-  Not supported

Must include:

- Evidence (screenshots, demo links, references)
- Any dependencies or constraints

5.1.4. Architecture & Technical Response

Must include:

- End-to-end architecture diagram
- Deployment model (SaaS / On-prem / Hybrid)
- API exposure model
- Integration patterns
- Modularity breakdown

Must explicitly confirm:

- No UI-dependent business logic
- API-first capability across core functions
- Compatibility with external orchestration layers

5.1.5. Delivery & Implementation Model (Critical Section)

Vendors must provide a realistic, scenario-based delivery plan:

a. Timeline Disclosure

Scenario	Timeline	Key Assumptions
Optimistic		
Realistic		
Worst Case		

b. Delivery Breakdown

- Major phases
- Parallel vs sequential work
- Critical dependencies
- Integration effort assumptions

c. Deployment Evidence

Provide 2–3 examples:

- | Client | Scope | Contract-to-Go-Live | Delay (Y/N) | Reason |

d. Failure & Risk Disclosure (Mandatory)

Vendor must disclose:

- Any delayed or failed implementation in last 24 months
- Root cause
- Corrective actions taken

Non-disclosure of known failures may be treated as misrepresentation.

5.1.6. Delivery Team Structure

Provide role-based structure only:

Role	Responsibility	Location	Dedicated (%)
------	----------------	----------	---------------

Must include:

- Program Lead
- Solution Architect
- Integration Lead
- Data Migration Lead
- Testing Lead

Vendor must confirm:

- Named roles will be contractually committed
- Substitution requires client approval

5.1.7. Commercial Model (Transparent & Complete)

Provide:

- License / subscription model
- Implementation cost breakdown
- Integration costs
- Support & maintenance costs

Must explicitly disclose:

- Volume-based pricing triggers
- API usage costs
- Mandatory future upgrades
- Any cost elements not included

5.1.8. Non-Functional & Operational Commitments

Confirm ability to meet:

- Availability $\geq 99.99\%$
- Defined RPO / RTO
- Security standards (e.g. ISO, SOC2)
- Monitoring & observability

Must indicate:

- Standard vs configurable vs custom

5.1.9. Exit, Portability & Lock-In Disclosure

Vendor must disclose:

- Data export capability
- Exit timelines
- Transition support model
- Any proprietary constraints

Must confirm:

- No artificial lock-in via architecture or licensing

5.1.10. Contractual Acknowledgment (Mandatory)

Vendor acknowledges that:

- Responses may be incorporated into contract
- Delivery timelines are binding if selected
- Architectural claims are warranted
- Undisclosed constraints may constitute breach

Formal sign-off required.

5.2 Evaluation Framework

Vendors will be assessed across:

Dimension	Weight
Functional & Capability Fit	25%
Architecture & Modularity	25%
Delivery Credibility	20%
Commercial Model	15%
Risk Transparency	10%
Operating Model	5%

5.3 Knock-Out Criteria (Non-Negotiable)

Vendors will be disqualified if unable to demonstrate:

- API-first architecture
- Modular, non-monolithic design
- Multi-entity / multi-country capability
- SSO / MFA support
- Data exportability
- Compliance with retention & audit requirements

5.4 Response Integrity Expectation

This RFP is structured to:

- Surface delivery risk early
- Validate architectural claims
- Ensure commercial transparency

The Bank reserves the right to:

- Validate responses through technical deep-dives
- Request proof-of-concept
- Contact references directly
- Disqualify incomplete or inconsistent responses

6.0 General Information

6.1 Scope of Bid

In support of the Invitation For Bids (IFB) indicated above, eProcess International Ghana Limited or Company hereinafter referred to as “the Purchaser,” issues this Bid Document for the selection of a suitable vendor (referred to as Bidder in this RFP) who will be responsible for the provision of an Asset and Liability Management (ALM) System in full compliance with the specifications, requirements, terms and conditions set forth in this RFP.

6.1.1 Clarification of Bid Documents

- A prospective Bidder requiring any clarification of the Bid Document shall contact the Purchaser in writing at all_epiacc_procurement@Company.com
- The Purchaser shall forward copies of its response to all those who have acquired the Bid Document directly from it, including a description of the inquiry but without identifying its source. Should the Purchaser deem it necessary to amend the Bid Document as a result of a clarification, it shall do so through an addendum.

6.1.2 Amendment of Bid Documents

- At any time prior to the deadline for submission of Bids, the Purchaser may amend the Bid Documents by issuing addenda. Any addendum issued shall be part of the Bid Documents and shall be communicated in writing to all who have obtained the Bid Documents directly from the Purchaser. To give Bidders reasonable time to take an addendum into account in preparing their Bids, the Purchaser may, at its discretion, extend the deadline for the submission of Bids.

6.2 Preparation of Bids

The Bidder shall bear all costs associated with the preparation and submission of its Bid, and the Purchaser shall not be responsible or liable for those costs, regardless of the conduct or outcome of the Bidding process.

The bidder shall bear all the applicable withholding taxes as per the laws of the Republic of Ghana. You may refer to the link below for further clarification on the WHT. Refer to the links below;

- i. Link to WHT rates (Non-Residents and Residents, etc) https://gra.gov.gh/wp-content/uploads/2020/09/WHT-TAX-CODES_DESCRIPTION-ANDRATES_2015.pdf
- ii. List of Countries that have double taxation agreement with the Republic of Ghana <https://gra.gov.gh/double-taxation-agreements/>

6.3 Language of Bid

The Bid, as well as all correspondence and documents relating to the Bid exchanged by the Bidder and the Purchaser, shall be written in English. Supporting documents and printed literature that are part of the Bid may be in another language provided they are accompanied by an accurate translation of the relevant passages into English, in which case, for purposes of interpretation of the Bid, such translation shall govern. Information supplied in any language other than the language of the bid without the proper translation shall be rejected.

6.4 Bid Prices

The Bidder shall identify and express the prices of the proposed Products and Related Services in the Price Schedules and in the Bid Form in accordance with the instructions therein and the requirements specified below. All items in the

Required Products and Services Schedules in the Schedule of Supply must be listed and priced separately in the appropriate Price Schedules in accordance with the General Instructions for the Bid Forms, using separate Price Schedules for each lot. If a Price Schedule shows items listed but not priced, their prices shall be assumed to be included in the prices of other items. Items not listed in the Price Schedule shall be assumed to be not included in the bid and, provided that the bid is substantially responsive, the corresponding adjustment shall be applied.

6.5 Currencies of Bid

Proposal Prices shall be quoted in USD. All fees must be gross (especially inclusive of withholding tax refer to section 7.2).

6.6 Technical Proposal

This shall comply with the Technical Specifications – refer to Sections 1 to 6

6.7 Period of Validity of Bids

Bids shall remain valid for 90 days after the Bid submission deadline date prescribed by the Purchaser. A Bid valid for a shorter period shall be rejected by the Purchaser as non-responsive.

6.7.1 Submission and Opening of Bids

- The Bidders shall submit his or her proposals via email to all_epiacc_procurement@ecobank.com
- Documents/proposals may be Zipped (up to 5MB, No Win RAR file) emailed or shared via link through Microsoft One Drive ONLY. The Electronic files should be free from virus and not corrupted.
- Unless specified otherwise the files format shall be PDF. Electronic messages must contain the subject indicated on the solicitation documents, failing and/or incorrectly stating the subject of email may result in failing to exactly locate Bidder's proposal and the Purchaser will not be liable for any consequences. Financial files only should be protected by password. The password must not be provided to Purchaser until the date and time of Financial Bid Opening.

- Proposal shall be addressed to eProcess using below address:

eProcess International Ghana Limited

Ecobank Ghana HQ

3rd Floor Reception

2 Morocco Lane, Off Independence Avenue Accra, Ghana.

Bid: RFP For The Provision Of An Asset And Liability Management System

Bid No.: 1/5/2026/RFP/ CIB & GROUP RISK

Attn: Head of Procurement & Records Management

- i. Unless advised by us, kindly note that submission of physical copies of proposals will not be considered, only proposals submitted via email as per the instructions above will be taken into consideration.
- ii. The Purchaser may, at its discretion, extend the deadline for the submission of Bids by amending the Bid Document in which case, all rights and obligations of the Purchaser and Bidders previously subject to the deadline shall thereafter be subject to the deadline as extended.
- iii. All responses, requests for clarification, and all other communications in relation to this RFP must be submitted

exclusively to **all_epiacc_procurement@ecobank.com**. No other communication channels shall be used.

- iv. All responses and supporting documentation shall become the property of eProcess and will not be returned.
 - v. eProcess ultimately reserves the right throughout this process to select any service option that best meets its business requirements and to hold discussions with any and all respondents.
 - vi. You must agree to the following conditions if you choose to respond to eProcess regarding this RFP:
 - vii. Neither the issuance of this RFP nor receipt of proposals represents a commitment on the part of eProcess, or any office within the eProcess.
 - viii. eProcess will not be responsible for, or in any way liable for, any costs incurred by vendors in the preparation of any responses or presentations relating to this RFP.
 - ix. This document is provided for the exclusive use of participating vendors and copies shall not be made available to any other party, without written consent from eProcess. Both vendors and eProcess acknowledge that they may come in contact with non-public information, which is considered confidential or proprietary to the other, including this document itself. Each party agrees not to use such information for its own benefit or allow it to be.
 - x. Released to or used by others. Each party agrees to exercise reasonable care to prevent disclosure to any third party.
 - xi. Neither party shall use the name of the other in publicity releases, referrals, advertising, or similar activity without the prior written consent of the other.
 - xii. Vendors need to respond in a format that refers to the following sections and numbered items and must specifically address each and every request for information contained herein.
- If you are unable to comply with any information requested, an explanation must be provided as part of the response. The subject of vendor's mail shall be "RFP For The Provision Of An Asset And Liability Management System"

6.7.2. Late Bids

- The Purchaser shall not consider any Bid that arrives after the deadline for submission of Bids. Any Bid received by the Purchaser after the deadline for submission of Bids shall be declared late and rejected.

6.7.3. Withdrawal and Modification of Bids

- A Bidder may modify or withdraw its bid after submission, provided that written notice of the modification or withdrawal is received by the Purchaser prior to the deadline prescribed for submission of bids. No bid may be modified after the deadline for submission of bids.

6.8. RFP Timetable

Event	Date
RFP Release	7th May 2026
Vendor's Response of Intent to Bid	8th May 2026
Deadline for Vendor's Request for Clarification	20th May 2026
Deadline for Vendor's Proposal Submission	4th June 2026 no later than 23:59GMT

6.9 Award of Contract and Award Letter

eProcess International Ghana Limited or Company upon receiving the completed and signed Form of Tender and Valid documents, and upon opening of tenders received, evaluated, and approved, shall write an Award Letter or Email to the contractor.

6.9.1 Acceptance of Contract

- The Contractor upon receiving the Award Letter or Email shall write an Acceptance Letter or Email to eProcess International Ghana Limited or Company immediately after receiving the Award Letter.

6.9.2 Signing of Contract

- Upon accepting the contract, the contractor shall proceed to sign an agreement with eProcess International Ghana Limited.

7. Financial

The financial proposal must be submitted separately and must be password-protected. Bidders are kindly requested to model their financial proposals in the order specified below.

Summary of Cost		
No.	Item Description	Cost (\$)
1	Cost of Solution/Product/Service	\$ -
5	Other*	\$ -
	Total	\$ -

Note 1

- * Kindly price all applicable items in the pricing schedule provided. Non-applicable items should be clearly marked "N/A".
- Kindly provide a detailed cost breakdown in addition to the cost summary, including the Total Cost of Ownership (TCO).
- Prices shall be deemed inclusive of applicable withholding tax in accordance with the laws of the Republic of Ghana. Any statutory deductions will be applied at source.
- Financial proposals will be opened and evaluated only for bidders that have met the minimum technical requirements.
- Should your organization be successful in this tendering process, all payments shall be made in accordance with our standard Purchase Order terms, i.e. within sixty (60) days of receipt of a valid and undisputed invoice, supported by an official Purchase Order issued to your organization.
- Unless advise otherwise, payment shall be quarterly by the Purchaser
- By participating in this RFP, the bidder accepts that their financial is inclusive of applicable withholding Tax (refer to point (c) under the Note 1).
- For "other services", kindly specify.

8. Appendix

Kindly complete the information security questionnaire attached this to the response.

Attach:

- a) Completed Information Security Questionnaire, Vendor Information Security Information

- b) Any other information that you might deem relevant.

Note 2:

Providers will be required to complete below Ecobank 3rd party vendor Due Diligence /assessment form when shortlisted for the next steps in this tender process.
